Claims 1 to 6 are pending.

***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Specification***

2. The abstract of the disclosure is objected to because the reference numerals should be put in parenthesis or removed.
3. The title of the invention is not adequately descriptive. A new title is required that is more clearly indicative of the invention to which the claims are directed by making reference to the first and second protective films.

***Drawings***

4. Figure 6 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

5. Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The scope and meaning of the language of claim 6 is unclear and not readily determined. The two dimensions referenced, the dimension of surface asperity and the dimension of a floating fluctuation are both dependent on such a variety of factors such as to be uncertain at any particular operational moment. Does the reference to surface asperity refer to a maximum asperity or an average asperity? Does floating fluctuation refer to a distance between the magnetic head and the disk?

In addition, it would appear that any head disk interface would inherently meet this limitation in the sense that the distance between the head and the base level of the disk would be the flying height of the head, the distance between the head and the asperity tops, plus the asperity height.

***Claim Rejections - 35 USC § 102***

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1, 5, and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Inoue et al (U.S. 6,400,531). Inoue discloses a read unit 3, a write unit 2, a first protective film 41, and a second protective film 42. The first protective film is formed

Art Unit: 2652

from SiN and the second protective film is formed from CF, i.e., fluorocarbon.

Fluorocarbon will exhibit a lower coefficient of linear expansion than SiN.

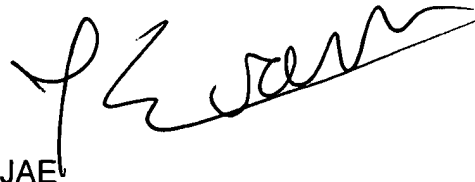

***Allowable Subject Matter***

8. Claims 2 to 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jefferson A. Evans whose telephone number is 571-272-7574. The examiner can normally be reached on Monday to Friday, 9:00am to 5:30pm.
